RESEARCH INTERESTS

Self-Supervised Learning

Continual Learning

Computer Vision

Deep Learning

AI for Healthcare

EDUCATION

Ph.D. in Imaging Science, [Rochester Institute of Technology](#) 📅 August 2019 – December 2025 (expected)

🇺🇸 Rochester, New York

- Relevant course work: Deep Learning for Vision, Human Visual System, Image Processing, and Computer Vision.

B.Sc. in Mechatronics Engineering, [Universidad Nacional de Ingeniería](#) 📅 March 2011 – December 2015

🇵🇪 Lima, Peru

- Relevant course work: Machine Learning, Image Processing, Object Oriented Programming, Research Methodology

EXPERIENCE

Research Intern, [Siemens Healthineers](#) 📅 Aug 2023 – Nov 2023 🇺🇸 Malvern, Pennsylvania

- Developed and implemented self-supervised pre-training strategies using masked autoencoders for 3D organ classification, 3D organ segmentation, and 3D lung nodule detector.
- Accelerated training of a transformer-based 3D lung nodule detector by x1000, in terms of number of iterations, through self-supervised pre-training.

Technologies used: Python, PyTorch, MONAI, Azure AI ML

Data Scientist, [NTT DATA Europe & Latam](#) 📅 May 2018 – July 2019 🇵🇪 Lima, Peru

- Developed and deployed a deep convolutional neural network for vehicle damage intensity classification with 70% accuracy for an insurance company.
- Implemented a recommendation system with implicit feedback based on neural networks and collaborative filtering for 1.5 million of clients and +150K of items.
- Developed a real-time cosmetic product classification app for mobile devices by training a convolutional neural network (MobileNet) with 96% accuracy.
- Developed an audio emotion classifier with 70% accuracy by training a deep convolutional neural network on spectrograms.

Technologies used: PyTorch, Keras, TensorFlow Lite, Python, OpenCV, Librosa, Docker, Flask, PySpark, DVC, Git, GitHub

Research Intern, [Siemens Healthineers](#) 📅 April 2017 – March 2018 🇺🇸 Malvern, Pennsylvania

- Improved lung nodule classification by designing a 3D convolutional neural network for CT scans, achieving 90% sensitivity with 1.45 false positives per patient, reducing the false positive rate by half compared to the previous system.
- Developed an annotation tool to correctly tag lung nodule images.
- Summarized and presented current machine learning state-of-the-art works in reading groups.

Technologies used: Caffe, Python, SimpleITK, Tkinter, CT scan data

Research Assistant, [Universidad Nacional de Ingeniería \(UNI\)](#) 📅 July 2016 – March 2017 🇵🇪 Lima, Peru

- Developed a convolutional neural network achieving 83% accuracy in detecting diabetic retinopathy from retinal images.
- The results were presented at International Conference on Artificial Neural Networks (ICANN 2017) held in Italy.

Technologies used: Keras, Python, OpenCV

Software Tester (QA), [International Business Machines \(IBM\)](#) 📅 April 2016 – October 2016 🇵🇪 Lima, Peru

- Developed and executed testing strategies to identify and resolve functional and non-functional defects within a cellular carrier's database management system.
- Built a face recognition system using IBM Watson visual recognition services for client identification.

Technologies used: Python, SQL, OpenCV, Watson visual recognition

TECHNICAL SKILLS

- **Programming:** Python
- **Deep Learning Libraries:** PyTorch, Continuum, MONAI
- **Applications:** Git, Bash Scripting, LaTeX, WandB, TensorBoard
